Radosław Wójtowicz: The basics of requirements analysis in the methodology of ECM systems implementation / Podstawy analizy wymagań w metodyce implementacji systemów ECM	88

Preface

The subject of the development and implementation of ICT is a source of many scientific considerations, whereas investing in modern ICT solutions is one of the main directions of organizational improvement. Therefore, the subject of management systems is still current and an important topic of publication. The editors would like to thank the authors for the following articles, thanks to which the magazine is thriving and developing.

An extremely valuable feature of the Business Informatics series is the fact that the studies included in it present various opinions and points of view on the application of modern ICT solutions. The perspectives and views presented by the authors allow the readers to broaden their own reflections related to the created view on the possibilities and directions of the application of information and communication technologies in economic practice. It is also important that not all the articles sent for publication meet the formal and substantive requirements. This further increases the significance and value of the texts which have received double positive reviews and were then selected for publication in this issue of Business Informatics. Currently, as a result of a multistage and strict formal and substantive verification of our journal, approximately 25% of the texts submitted are accepted for publication.

The editor of this issue would like to express his gratitude to all the authors who wanted to share their experiences and opinions. He would also like to thank the reviewers for their insightful and factual assessments of the submitted works.

Iwona Chomiak-Orsa
